New Snowy Hydro DVD Available Soon!

*Danielle Neilson
Marketing
Communications
Advisor*

As a result of the findings from the independent community survey conducted last year, Snowy Hydro has produced a DVD to provide accurate and up to date information to the local community about the company and the Scheme.

The DVD is being presented by well known and locally born television identity, Steve Liebmann, who grew up in Cooma while the Scheme was being built.

The DVD is being presented by well known and locally born television identity, Steve Liebmann...

Steve Liebmann is one of the nation's most respected broadcasters and TV-anchors and was co-host of the long-running Nine Network "Today" program for over 20 years.

The DVD will include information about the Scheme, the Snowy Hydro Company and the National Electricity Market in which we operate.

Steve Liebmann also talks about water, gas developments, the growth in demand for electricity and extensive maintenance undertaken by Snowy Hydro on the Scheme. There are also interviews with employees from all areas of the company.

The results of the community survey as outlined in Edition 2 of Snowy Hydro NEWS, clearly showed:

- Only half of the local community have a good or excellent knowledge of Snowy Hydro.
- There was mixed understanding of the relationship of the Snowy Scheme to the Snowy Hydro company, and the National Electricity Market, in which Snowy Hydro operates.
- The community survey also strongly showed that our local community do want to understand more and want to be kept informed.

This DVD seeks to do just that.

Its important that the community understands the operations of the Scheme and how the company has changed and evolved over the years.

Some may ask, why has a DVD like this been produced and supplied to the local community, well its simple really and here's why...

Business News

- > New Snowy Hydro DVD available soon!
- > Business Update
- > Toyota Hybrid continues to be part of Snowy Hydro Fleet
- > Water Storages Update
- > Khancoban Pondage & Swampy Plains River Flows
- > Frog Recovery Program

Aerial photo of Jindabyne

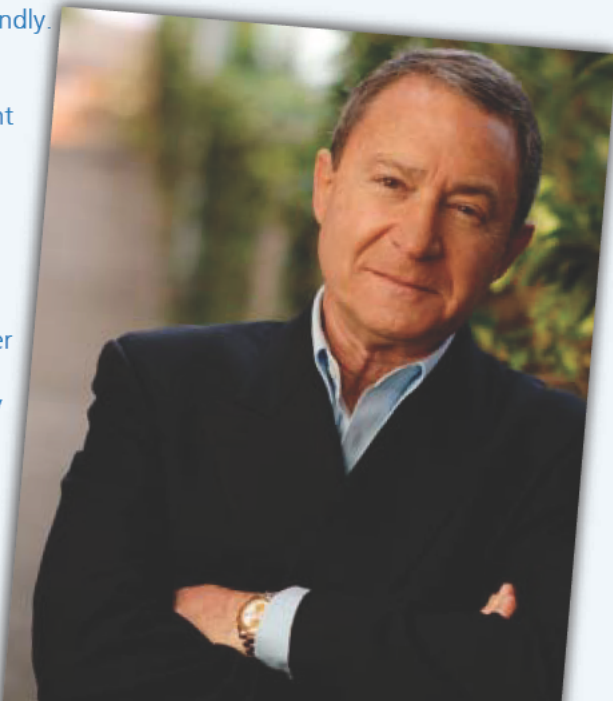

- The community survey showed there is an opportunity to improve community understanding of Snowy Hydro.
- The community want to understand more about the Scheme and the company.

But how to do it when?

- Just over 10% of the local community have visited the Snowy Hydro website over the past year. This alone has meant we have now redone our website as advised in Edition 2 of Snowy Hydro NEWS to be more user friendly.
- Our local TV news services have very little local content so the effectiveness of explaining things “on camera” and in real life is all but impossible through regional news services.

So a DVD was the best answer in meeting the information needs of our local community in an easy to understand format that can be viewed in your own home.

Television personality, Steve Liebmann

A DVD was the best answer in meeting the information needs of our local community...

This DVD is about getting the facts to the community so that next time you may be talking to a Snowy Hydro employee, whether its your neighbour or friend, you will have a better understanding of the tremendous job they do, the complexity of the market we operate in and be better informed about the company today and into the future.

Keep an eye out in your mailbox over the next few weeks as the DVD will be provided to the communities of the Snowy Mountains region to improve community understanding of how our company operates.

This is essential to further improve our relationship with the local community and ensure that any community discussion on Snowy Hydro is, in the future, done with informed understanding.

This DVD is an strong demonstration of our company’s commitment to keeping the community informed.

Keep an eye out in your mailbox over the next few weeks as the DVD will be provided to every household...

Over 500 local residents who participated in the independent community survey last year have said that something like this is needed and wanted – well its coming to you soon and thank you for letting us know. For any feedback, please email us at communityfeedback@snowyhydro.com.au

Laverton North, Melbourne

Business Update

*Terry Charlton
CEO & Managing Director*

There can be no doubting that all who work within Snowy Hydro Limited want the business to succeed. Our people want the Snowy Scheme to be continually upgraded and kept technically modern and operating at world's best practice, as it is today. We all want the Scheme to be forever strategically important and widely regarded with considerable pride.

To achieve these objectives we need access to considerable amounts of additional capital that our shareholders understandably won't provide and we are unable to borrow. Privatisation, which is, listing on the Australian Stock Exchange (ASX), would have given us access to additional capital. The failure to privatise the Company was then, and continues to be today, detrimental to the long term future of the Company.

The recent announcements by the NSW Government to sell or lease the NSW Electricity industry except for Snowy Hydro are a real concern to us. It is also of concern to many of our staff who fully appreciate and understand the market in which we operate and are aware of the current position Snowy Hydro now faces, and what this could mean long term for the Company.

Such were these concerns that a number of staff made their own representations to the NSW Treasurer, Michael Costa, and Minister for Energy and Water, Ian McDonald, during the recent NSW's Governments Cabinet meeting in Cooma. Separately, local Snowy Hydro executives also had a meeting with Treasurer Costa.

We all want the Scheme to be forever strategically important and widely regarded with considerable pride...

The staff who attended these meetings have advised me that the NSW Treasurer, Michael Costa said "we know we are losing value in the Snowy Hydro business because

the opportunity to list in June 2006 was blown." The staff have also advised me that Treasurer Costa also said "Snowy Hydro could be in trouble in a few years time."

This is of concern to me, our executive and of course our staff and I will be meeting with all our staff over the coming months to openly discuss our current predicament, the comments made by the Treasurer and what we may be able to do to address the current reality.

While Costa's statement is a statement of the obvious I do not accept there is nothing we can do to limit the short and long term damage to the Company and by extension, to the Snowy Scheme and our regional communities.

Snowy Hydro's Cooma employees

Valley Power, Traralgon VIC

Hopefully the Treasurer's blunt but correct comments will now serve as a wake-up call to all. We know our regional communities want a successful and growing Snowy Hydro Limited but it is not going to happen without access to additional capital, and soon.

We have no choice but to recognise that the Snowy Scheme operates in a privatised industry and it too has to have access to additional capital as does any ASX listed company. It has to be free to operate on a level playing field.

It is unrealistic to contemplate a return to days long past when the iconic Snowy Scheme operated in a centrally planned, Government controlled, electricity generation world. The market has moved too far forward, so has the company.

It has to be free to operate on a level playing field...

No business can survive by standing still and clinging to the past, and nor should this be the fate of Snowy Hydro. This is not an acceptable option for Snowy Hydro.

If we are to ensure the Snowy Scheme retains its rightful place in the future, as those who built the

Scheme would certainly have wished, we need to continue to grow a profitable business and add new capabilities.

We must operate an electricity business that is able to grow profit in order to pay for all that we need to do. Snowy Hydro does not get paid by water "users" for all it spends on maintaining dams etc, nor for the water it stores and transfers, or for the environmental releases it is required to make. Only a successful and growing electricity business pays for all we do.

The Owen Report, commissioned by the NSW Government, recommends the privatisation of most of the NSW owned electricity assets and, the NSW Government has now announced it will be doing just that, except that is, for Snowy Hydro Limited. Snowy Hydro is to be excluded.

Implementation of the Owen Report will have the result that Snowy Hydro's large retail company customers will be bought by our competitors, who also own generation plant, thus making them vertically integrated.

One can reasonably envisage that the market will be made up of five very large, vertically integrated and highly competitive, energy businesses. I had hoped that Snowy Hydro would have been the sixth but this is no longer possible unless we have access to additional capital.

If we are to ensure the Snowy Scheme retains its rightful place in the future, as those who built the Scheme would certainly have wished, we need to continue to grow a profitable business...

There are assertions that the Snowy Scheme, because of its design, has some special and protected place in the electricity market. This is not so.

Modern gas fired electricity generation plant can, for all practical market needs, be as effective in responding to demand shifts as can hydro plant. Many of our competitors already recognise this and are building their own fast start gas capability.

Laverton North Power Station, Melbourne VIC

Any suggestions that the current government shareholders will contribute additional equity to allow the Company to grow and be more competitive are unrealistic. Governments have other priorities and so they should. Even to suggest that Government owners will not take dividends for any substantial period of time is also unrealistic.

We will continue to explore all options to protect the value of the business and the Scheme...

But we will find a way or ways to work through these challenges and I am encouraged by community survey results which clearly show that the community wants to see a successful Snowy Hydro.

We do not accept the situation Snowy Hydro is now in and we will continue to explore all options to protect the value of the business and the Scheme. However, the options are few, and privatisation remains the most sensible and beneficial of the options.

What happens now to the Company is a decision for the shareholders. We can only present the facts and encourage them to accept that there is a better future for the Company than the one assigned to it at this time.

It is now up to the local community and particularly local community leaders, to show some informed leadership in order to help secure a brighter future for this Company. It is a major regional economic and social contributor and even this alone is worth protecting.

We ask that the community now give active and informed support to Snowy Hydro Limited in its need for capital for business growth, even if this means accepting privatisation of the business, albeit with conditions to protect local employment, local investment and local identity.

The recent community survey indicated a very large majority of

the community do care about our success and our future and want to see the Company grow.

Regrettably, the large majority has so far been very silent. Louder voices have prevailed.

Working with the community I hope also we will see real and substantial support for the Company's aspirations to acquire new and additional equity capital.

If there is to be ongoing community discussion about our future, and I hope there is, I appeal for it to be a positive debate, to be accurately informed, and above all, to be forward looking.

Valley Power, Traralgon VIC

Toyota Hybrid Continues to be part of Snowy Hydro Fleet

*Doug Rendoth
Logistics Manager*

The latest model Toyota Prius hybrid motor vehicle has joined the Snowy Hydro fleet. The new Prius will be used for future internal driver training as well as the Snowy Hydro Young Driver Training Program.

When not adapted to a skid frame for training, the Prius will be available for everyday use.

The Toyota Hybrid System powering the Prius seamlessly combines the power of an advanced 1.5-litre petrol engine and a 33kW electric motor.

The Prius uses up to 50 percent less petrol than an equivalent-sized conventional car and emits about half the carbon dioxide on a typical city drive cycle.

It is very responsive, even at highway speeds or up hills, and does everything you would expect from a car of its size and features.

Its performance would surprise anyone who drives it.

The 1.5 litre petrol engine/electric motor/battery hybrid drive train shifts the Prius from rest to 100km/h in 11.6 seconds.

Snowy Hydro is pleased to be able to do what we can to assist with further reducing greenhouse gas emissions...

Energy that is not required to propel the car is converted to electricity and stored in a sealed 274-volt battery. Regenerative braking allows the vehicle to convert kinetic energy into additional electricity.

It's a spacious, comfortable sedan, with a five star crash test rating, all the equipment you need and the ability to get around town using just 5.6 litres/100km of regular unleaded fuel.

The Toyota Prius offers ecologically friendly hybrid technology and Snowy Hydro is pleased to be able to do what we can to assist with reducing further greenhouse gas emissions.

Additionally, all our carbon emissions from the rest of our fleet are offset through GreenFleet Australia. For more information on GreenFleet visit our website at www.snowyhydro.com.au

The new Toyota Prius

Lake Eucumbene

Water Storages Update

Andrew Nolan
Manager, Water

Water inflows into Snowy Scheme storages were above average for the month of December, however they did drop back to slightly below average over the month of January, mainly due to the onset of some hot dry weather.

While overall, Snowy Scheme storages have increased and expected drops in lake levels over January did not occur, mainly due to favourable inflows in December and lower than expected electricity market demands, our water position for the year still remains below average.

Snowy Scheme storages are still around their lowest levels since construction as a result of the major drought that continues to impact the region.

Our water position still remains below average...

As we now move into the historical "dry inflow season" for the Scheme and increased electricity market demands, it is expected that water levels in Snowy Scheme storages, including Lake Jindabyne and Lake Eucumbene, will gradually decline over summer and into autumn.

Khancoban Pondage and Swampy Plains River Flows

Mark Clayton
Area Manager Murray

Many local residents and visitors to the region over the 2007/08 summer would have noticed Khancoban Pondage at a higher level than the previous summer. In addition, flows down the Swampy Plains River were also more sustained.

Twelve months ago, inflows from the mountains into Scheme storages hit record lows. This resulted in Khancoban Pondage reaching low levels prior to Christmas 2006 and flows down the Swampy Plains River dropping to under 5 cubic metres a second.

Additionally, peak electricity generation requirements leading up to the Christmas break were not high, resulting in minimal generation and water flow into Khancoban Pondage from Murray 1 and 2 Power Stations.

Water levels in the pondage and flows downstream were better during the summer of 2007/08, primarily due to improved inflows into storages such as Geehi and Khancoban Pondage. Also essential electricity demands meant increased generation from our Murray 1 and 2 Power Stations when compared to 12 months ago.

The combination of these factors resulted in higher levels in the Khancoban Pondage over summer and more sustained flows downstream this year. Whilst recent inflows have been better, we are still a long way off average inflow levels and our water position for the year remains well below average.

Snowy Hydro has a number of processes in place to manage and communicate the effects of low inflows and storage operations to the local community, these include:

- Advising local stakeholders and landholders downstream.
- Advising and briefing the local tourism industry and key operators.
- Advising NSW Fisheries.
- Advising Department of Water & Energy.
- Regular updates to local news media.
- Regular updates to Tumbarumba Shire Council, North East Water and other agencies downstream.

Veena Jovic, Alison Smith and
Charlotte Fletcher.

Frog Recovery Program Reintroduction at Bourke's Gorge

Mick Griffiths
Acting Manager,
Environment

In early January this year, 200 Spotted Tree frogs (*Litoria spenceri*) were reintroduced to their natural environment in Bourke's Gorge.

This was done as part of the Department of Environment and Climate Change's (DECC) Frog Recovery program which has been supported by Snowy Hydro for many years.

The frogs' journey started with the last remaining male frog found at Bourke's Gorge, which at the time was the last population of this species in NSW. Brought to captivity, this male was co-inhabited with female Spotted Tree frogs, locals from a population at Wheeler Creek in Victoria.

It is the progeny from this breeding success that were re-introduced to Bourke's Gorge in January.

The first wild breeding of reintroduced frogs, released during 2005, is expected during Spring 2008. Results from the recovery program show about 15 to 20

percent of this first release have survived to sexual maturity.

It is the progeny from this breeding success that were re-introduced to Bourke's Gorge in January...

While the frog habitat is a short distance downstream from the Bourke's Gorge aqueduct intake, cooperative work between Snowy Hydro and DECC has resulted in an agreed approach to manage maintenance operations for this asset.

This will provide certainty around timing of maintenance activities for us and give the frogs a better chance to establish.

Spotted Tree Frogs became extinct in NSW in 1998 and are now listed as endangered both in NSW and nationally.

The Spotted Tree Frog

Welcome to the 2008 Trainees

Tracy Crowe
Human Resources
Advisor

In January 2008 Snowy Hydro welcomed six new administration trainees to the company. Each year Snowy Hydro invites students from the region who have just completed their HSC to join Snowy Hydro on the 12 month traineeship.

During their time at Snowy Hydro they not only learn key administrative skills, but they also attend TAFE and gain both Certificate III and Certificate IV in Office Administration.

"I am really looking forward to working at Snowy Hydro this year. Not only will I get to experience what it is like working for a large company, but it will help me with my career in the future," said Veena Jovic.

The traineeship program has been running at Snowy Hydro now for over 15 years, and is a great opportunity for local students to gain real work experience which is a great step in starting their career.

This year's trainees (pictured above) are Joel Tozer, Lauren Gelling, Chris Schofield, Veena Jovic, Alison Smith and Charlotte Fletcher.

Red Energy enters gas market

*Martin Exelby
Red Energy*

Snowy Hydro isn't widely known as an electricity retailer, but its 100% owned retailer, Red Energy, is continuing to grow and shake things up in other States.

Red has been owned by Snowy Hydro since November 2004, retailing electricity to residential customers and small businesses in Victoria and South Australia. Late last year, we also started selling gas to households in Victoria. We have recognised for some time that a lot of people prefer the convenience of a single supplier for their household energy needs, and launching a gas business has contributed to the next phase of Red's growth.

One of Red's unique and popular selling points has been its guarantee that for each unit of electricity its customers buy, it will buy one from a hydro renewable source – the Snowy Mountains Scheme. Red now sells around one third of the electricity generated in the Snowy Mountains each year.

Red Energy currently only sells electricity and gas to Victoria and South Australia, but is looking forward to the opportunity to take its next step forward into other states. For more information go to www.redenergy.com.au

Jounama Small Hydro Project

*Peter Hill
Senior Project
Manager*

As mentioned in Issue 2 of Snowy Hydro NEWS, Snowy Hydro is constructing a 14 Megawatt small hydro-electric power station that will be attached to the existing river diversion conduit at Jounama Dam, near Talbingo.

Civil works are progressing well with the penstock being installed within the river diversion conduit. Bulk excavation works have now also commenced.

The switchyard construction is progressing as part of the power distribution network for the new installation once it is commissioned. To date the main transformer has been installed.

The manufacturing of the major electrical and mechanical components for the small hydro plant is complete and ready for shipping from Spain and is due in Australia in early April.

The manufacturing of the major components is now complete...

The small hydro, costing \$21 million, will enable energy to be economically recovered from the release of waters to Blowering Reservoir.

Removal of Jindabyne Cofferdam

*Darryl Pead
Area Manager
Kosciuszko*

The removal of the coffer dam is the final stage of the Jindabyne Project Works. Removal of the coffer dam was planned for late January 2008. However, some unexpected delays in approvals for the removal of the coffer dam by the relevant agencies have caused the project to be delayed.

The community will be kept up to date with the project...

A contractor has been engaged for the project and planning for the works is progressing. It is planned for works to commence as soon as possible once the outstanding matters are resolved. It is anticipated that the earliest works can now commence will be March 2008.

The community will be kept up to date with the project including:

- notification of works start dates
- traffic management arrangements.
- project updates..

It is still expected that the works will be completed by early June 2008. Snowy Hydro will keep the community informed of progress of the project and if you have any questions, please do not hesitate to contact me directly on 6453 2387.

The Snowy Hydro SouthCare Rescue Helicopter lands on the lawns at Government House as part of the 10 Year Anniversary Function.

His Excellency, Governor General Michael Jeffery presents an award in recognition of sponsors, donors and volunteers to Snowy Hydro's Ken Lister.

3000 missions and 10th Anniversary

Lara McAuley
Regional Marketing
Assistant

2008 brings the 10th Anniversary of the Snowy Hydro SouthCare Rescue Helicopter Service and with it, much to celebrate! Since the start of the Service, over 3,000 missions have now been completed. Whether the mission is flown to transfer the ill or seriously injured, search for someone that is lost or to put out fires, each mission is flown with the ultimate goal of saving lives.

The Snowy Hydro SouthCare Service is only possible because of supporters like Snowy Hydro Limited, which pledged an additional \$2.15 million dollars of support to the Service in 2006. As a result of this support, and that of other sponsors and donations, Snowy Hydro SouthCare provides services 24-hours-a-day, every day of the year, so the helicopter can be there when it's needed most.

In the first ten years of service, people have been rescued from dire situations throughout the ACT and southeastern NSW.

On February 17 Snowy Hydro SouthCare reached a significant milestone, it's 3000th mission. A 16 year old male from Queanbeyan was rescued following an accident on his trail bike near Captains Flat in the Tallaganda State Forest.

Each mission is flown with the ultimate goal of saving lives...

In recognition of ten years of service to our local community, on the 14th February 2008 the Governor-General of Australia presented awards on behalf of the Snowy Hydro SouthCare Helicopter Fund to four groups that have made enormous contributions to the Service. Awards were given to:

- The pilots, aircrewmen and engineers for flying the aircraft in all conditions and terrain to return the patient safely to hospital - received on behalf of the flight team by CHC Canberra Base Manager and Senior Pilot Captain Craig Thomas.
- The intensive care paramedics from the ACT Ambulance Service and the medical officers from The Canberra Hospital Shock Trauma Service for providing the highest level of clinical care and a critical link in the chain of survival for patients - received on

behalf of the team by Intensive Care Paramedic Team Leader Mr Trevor Stohr and Dr Damian McMahon.

- The sponsors, donors and volunteers for providing financial support and tireless fundraising efforts that help keep the helicopter in the air and saving lives - received by Snowy Hydro Limited's Executive Officer Production, Mr Ken Lister.
- The ACT and NSW Governments who worked together to establish the service - received by the ACT Minister for Police and Emergency Services, Mr Simon Corbell, and the Chief Executive Officer of the Ambulance Service of NSW, Mr Greg Rochford.

During his speech, the Governor General spoke of the Service saying, "In my recent Australia Day message, I said that during our last year in office, Marlena and I wanted to encourage all Australians to care for ourselves, for one another, our nation and the land we are so lucky in which to live. The Snowy Hydro SouthCare helicopter fulfils this vision admirably."

To make a donation or for more information about how you can help Snowy Hydro SouthCare, visit www.snowyhydrosouthcare.com.au or call (02) 6207 8375.

The Snowy Hydro Team breaks ahead in the Community Dragon Boat Challenge

Community Partnerships

Snowy congratulates organisers of Lake Jindabyne Flowing Festival

David Hogan
Manager
Regional Marketing

Snowy Hydro was again this year a major sponsor of the Lake Jindabyne Flowing Festival and I would like to congratulate the organisers Janet Mackay and Jo Davis, their committee and volunteers for their efforts in organising and running such a successful event. Thanks must also go to Steve Forbes who MC'd the event and dragon boat races all day.

Those involved in putting on the flowing festival are to be congratulated on a sensational community event. The 2008 Lake Jindabyne festival attracted thousands of people and almost 40 teams for the Dragon Boat Challenge. It's a credit to the organisers, other sponsors and the local community who made the day the success it was.

Those involved in putting on the Flowing Festival are to be congratulated...

Snowy Hydro's support of the Festival is a major part of Snowy Hydro's Community Partnership Program and for the second

year included support for the 2008 Snowy Hydro Junior Team Challenge.

The Snowy Hydro Junior Team Challenge provided the opportunity for local school children to participate in the Dragon Boat Challenge. Along with seven other youth teams, the schools that participated included Jindabyne Central, St Patricks Cooma and Snowy Mountains Grammar.

Snowy Hydro Team Wins 2008 Community Dragon Boat Challenge

Ken Lister
Executive Officer
Production

Snowy Hydro also entered two teams in the Lake Jindabyne Flowing Festival's Dragon Boat Challenge held on the 10th February.

I was fortunate enough to be on Snowy Hydro Team 1 and we made it through to the Final and won the event.

It was a great team effort and we had a wide

range of staff on the winning boat from trainees, to engineers, administration, Human Resources, technical, senior managers and Executive.

It was a great team effort and we had a wide range of staff on the winning boat...

The staff that participated on both teams were a great example of the quality people at Snowy Hydro and we are all proud to have represented our company and participated in the 2008 Lake Jindabyne Flowing Festival and Dragon Boat Challenge.

We also look forward to competing again in 2009!

Below: Snowy Hydro Team 1 accepting the Lake Jindabyne Flowing Festival Community Dragon Boat Challenge Trophy.

Community Partnerships

School Safety Calendar Competition

*Narrele Kelley
Education Program
Coordinator*

Snowy Hydro Limited recently conducted a competition with primary schools around the Snowy Mountains Region in an effort to promote safety.

Each year Snowy Hydro's in-house safety program "All Learn by Promoting Safety" (ALPS) produces a calendar for employees with important safety information.

This year, it was decided to ask the local schools to help with design and an invitation was sent to students to enter the Snowy Hydro Safety Calendar competition.

Students were invited to design a picture for each month of the calendar...

The initiative was the brainwave of the Snowy Hydro ALPS steering committee and ALPS coordinator Trevor Prior to design an ALPS Calendar for 2008 with the emphasis on safety at work.

Students were invited to design a picture for each month of the calendar and in the process learn about living and learning in a safe secure environment.

"Looking at the final calendar is a good reminder for us all to be safe at work, because our families, including the children whose pictures made it into the calendar, expect us to come home to them

in the same condition that we went to work," said ALPS coordinator, Trevor Prior.

The student's works consisted of posters with safety messages through to very colourful and graphic drawings. A great deal of thought and effort went into all the children's drawings with a wonderful result.

Congratulations to the Cabramurra Public School Students, Fletcher Chorvat, Emelia Keenan and Jade Jacobs. Cooma North Public School Students, Dean Trickey, Shannon McGufficke, Tyler Berry, Zoe Walker, Alex Bridgeman, Jack Markham, Jade Wright and the Khancoban Public School Students, Ashlea McCallum and Ben Lucas.

Snowy Hydro Sponsorship of Tumut Festival of the Falling Leaf - April 2008

*Maarten Van der Stap
Area Manager
Lower Tumut*

Snowy Hydro has just announced that it will be again a Gold Leaf (Major) sponsor of the Tumut Festival of the Falling Leaf for 2008. Snowy Hydro's support of this festival is a major part of our community partnership program and we have been a proud supporter of this tremendous community event for many years.

Tumut's Festival of the Falling Leaf has been held every April now for over 50 years and consistently draws several thousand people each year.

Above: Snowy Hydro's Trevor Prior presents Khancoban Public School's Principal Adam Preston and students Ashlea McCallum and Ben Lucas with their copies of the ALPS Calendar.

The Festival is a celebration of the Autumn colours of the town and a showcase event for the region.

Tumut's Festival of the Falling Leaf has been held every April now for over 50 years...

The Festival of the Falling Leaf enjoys terrific support from the community and from other sponsors and that is why Snowy Hydro is again pleased to support the 2008 event which will be held on the 26th and 27th of April 2008.

Snowy Hydro is the naming rights sponsor of the Snowy Hydro Gala Day as part of the weekend long festival. The Snowy Hydro Gala Day is on the Saturday and features live music, entertainment, stalls, displays and children's entertainment. We will of course be attending this year's event and if you want more information about Snowy Hydro, or would like to come and say hello to our friendly staff, please do so, just keep an eye out for the Snowy Hydro Marquee in the park.

snowyhydro
