Subject: Snowy Hydro releases 'SnowyLIVE' water app

Snowy Hydro releases 'SnowyLIVE' water app

Real time water information from the Snowy Scheme is now available on your smart device through Snowy Hydro's free SnowyLIVE water app.

Over the last year Snowy Hydro has been creating the app with development specialists Spatial Vision, and SnowyLIVE can now be downloaded from either the App Store (for Apple devices) or Google Play (for android devices).

Users can access a number of features including lake levels of Jindabyne, Eucumbene and Tantangara, and water releases from Jindabyne Dam, Tantangara Dam and Khancoban Dam.

"Lake levels is one of the most commonly accessed pages on the Snowy Hydro website so it made sense to make the information available in an easy to use app that people can download and carry with them on their smartphones and tablets," said Community Relations Manager, Heath Woolley.

Camping is not permitted on lake foreshores except for in established caravan parks and National Parks and Wildlife Service areas such as Denison at Lake Eucumbene. The app has helpful information for locals and visitors to the region about Snowy Hydro's four visitor facilities and advertises some of the caravan parks around the Snowy Mountains.

"In providing the names, locations and easily accessed contact details for caravan parks, we hope to support other initiatives underway to reduce illegal camping," said Mr Woolley.

There will be regular updates for the app - version two is already in the planning stages which will also include the snow depths charts.

Snowy Hydro provides a range of information to the public about the Scheme and believe that making this information available through the SnowyLIVE app will result in even greater communication with those interested in the Scheme.

We would also like to hear your feedback on the app - please email us at
